

**United Nations General Assembly**  
RESOLUTION

---

**United Nations Committee:** General Assembly

**Topic:** Providing Clean and Affordable Energy for All – Committee 2

**Sponsors:** Federative Republic of Brazil, Republic of Iceland and the Islamic Republic of Afghanistan

The General Assembly,

*Having studied* that the use of harmful cooking fuels and methods are leading to around four million premature deaths around the world,

*Deeply disturbed* that 1<sup>st</sup> world countries are the major producers of carbon emissions with little clean and renewable sources, even though they are wealthy,

*Bearing in mind* that about 3% of Afghanistan’s households are connected to the national grid,

1. Recommends that new cooking fuels/methods like cleaner biomass stoves and liquefied petroleum gas to be implemented around the world;<sup>1</sup>
2. Reminds first world countries that they do have the funds to use clean energy sources but instead choose not to, and governments could possibly give incentives to use clean energy;<sup>2</sup>
3. Supports funding and resources to help families, specifically women, to gain electricity within their homes.<sup>3</sup>
